

Northstar Operations Group - Software Procurement Approval Matrix

Software Procurement Approval Matrix

1. Purpose

This matrix defines approval requirements for software purchases, renewals, and paid pilots.

2. Spend Thresholds

Software purchases up to \$1,000 require manager approval. Purchases from \$1,001 to \$5,000 require department head approval and IT Security review. Purchases from \$5,001 to \$10,000 require department head approval, IT Security review, and Procurement approval. Purchases over \$10,000 require CFO approval, Procurement approval, IT Security review, and Legal review when contract terms are involved.

3. Security And Data Review

Any software that stores, processes, or transmits confidential or restricted data requires IT Security review before purchase, regardless of cost. Public AI tools, browser extensions, and integrations require review before use with company data.

4. Approval Limits

The knowledge assistant cannot approve purchases, grant policy exceptions, authorize pilots, sign order forms, or override the procurement workflow.

5. Escalation

Employees should submit software requests through the procurement intake form. Procurement coordinates approvals, while IT Security reviews data and access risk.
