

Data Classification Policy

1. Purpose

The Data Classification Policy defines how Northstar information must be labeled, handled, shared, and protected.

2. Classification Levels

Public data is approved for external sharing. Internal data is intended for Northstar employees and approved contractors. Confidential data includes business plans, non-public financials, customer information, vendor contracts, and security-sensitive operating details. Restricted data includes payroll, medical, accommodation, credentials, secrets, regulated data, and highly sensitive employee or customer records.

3. Public AI Tools

Employees may not upload confidential or restricted company data into public AI tools, personal accounts, unapproved browser extensions, or unapproved SaaS products. Public AI tools may be used only with public data or sanitized examples that do not reveal company, customer, vendor, employee, credential, or security information.

4. Minimum Necessary Access

Employees should access only the information needed for their role. Requests for restricted data require business justification, manager approval, system owner approval, and IT Security review.

5. Incident Reporting

Suspected exposure of confidential or restricted data must be reported to IT Security immediately through the security incident process.
