

Northstar Operations Group - IT Access Request SOP

IT Access Request SOP

1. Purpose

The IT Access Request SOP defines how employees request access to Northstar systems.

2. Request Submission

Employees request system access through the IT service desk portal. Each request must include the system name, business reason, requested role or permission level, duration if temporary, and manager name.

3. Approval Requirements

Standard access requires manager approval and system owner approval. Privileged access also requires IT Security review. Access to restricted data requires a documented business need and may require additional HR, Legal, or Privacy review.

4. Fulfillment Timeline

Standard access requests are usually fulfilled within two business days after all required approvals are received. Privileged or restricted access may take longer because additional review is required.

5. Access Controls

Employees may not share accounts, passwords, tokens, MFA codes, or credentials. Access must be assigned to named users and removed when no longer needed.

6. Escalation

Urgent access issues should be escalated through the IT service desk. Security concerns should be reported to IT Security immediately.
